Under the roof of VERDER SCIENTIFIC we support thousands of customers worldwide in realizing the ambition we share. As their technology partner behind the scenes, we deliver the solutions they need to make progress and to improve the everyday lives of countless people. Together, we make the world a healthier, safer and more sustainable place.

# QATM – Materialography & Hardness Testing

Customized solutions – with competence and passion

## Machines and equipment for the materialographic laboratory

Whatever you need for quality testing and material analysis, QATM has it all. As a manufacturer of high-quality machines for materialography (metallography) and hardness testing, we offer the most comprehensive solutions for your needs. We not only supply a wide range of instruments but also accessories, consumables, complete laboratories and tailor-made special-purpose solutions.

## We aim for the highest quality

Our innovative cut-off machines, mounting presses, grinders, polishers/electrolytic etchers, hardness testers and analysis systems provide maximum reliability and flexibility. The R&D departments for hardware and software work in close cooperation with our customers to ensure continuous optimization of our products. QATM is certified according to EN ISO 9001:2015 to make sure our internal procedures for conception, development, purchasing, sales and service are efficient and reflect our high standards.

Customers all over the world appreciate QATM's extensive sales and service network as well as the direct communication with our experts. The comprehensive expertise and creativity of our qualified staff are the basis for the consistent high quality of our solutions.

QATM offers:

### I MODERN PRODUCTION ENGINEERING AND HIGH VERTICAL INTEGRATION

Optimum control of every single component of our machines guarantees reliable QATM "made in Germany" and "made in Austria" product quality.

### I APPLICATION CONSULTATION AND END-USER SEMINARS WITH INDIVIDUAL FOCUS

Our application experts ascertain parameters and equipment configurations best suited for your sample preparation process.

### I IN-HOUSE HARDWARE AND SOFTWARE DEVELOPMENT

QATM hosts the complete R&D process in-house. Tailor-made solutions to meet individual requirements are our strength.

### I CONSUMABLES FOR ALL STEPS OF THE MATERIALOGRAPHIC SAMPLE PREPARATION

We offer a wide range of high-quality consumables for materialographic sample preparation and analysis. The consumables are tested in detail and chosen for optimal operation of QATM equipment by our application specialists at our central inhouse laboratory.

## Expert Guide - Materialography/Metallography

A comprehensive guide is hereby provided to all who deal with materialographic sample preparation. The systematic structure with extensive documented examples is suitable for both beginners and experienced users who want to learn or look up a particular preparation technique. You will find numerous tips and tricks in this

book, which can also prove useful for experienced practitioners. This is especially true when working on complex or uncommon test objects.

# Consumables for cutting

# Precision cutting

Precision cutting enables cutting directly next to significant analysis areas and for materials with particularly complex material properties. The material thickness of the precision cut-off wheel is significantly thinner than cut-off wheels with larger diameters. The bond of such cut-off wheels, which enclose the abrasive particles (aluminum oxide, diamond or CBN), can be resin, rubber, galvanic or bronze. QPREP precision cut-off wheels are the optimal solution exactly for such special cutting requirements.

## PRODUCT ADVANTAGES

- ! Minimal material loss due to thin cut-off wheel thickness
- ! Cutting surface closer to the target surface / defect possible
- ! Allows cutting of small, sensitive, and very brittle specimens

## PRECISION CUT-OFF WHEELS

Cut-off machine	Arbor size	Wheel diameter (max.)
Brillant 220	12.7 mm	203 mm/8"
Qcut 150 M	12.7 mm	203 mm/8"
Qcut 150 A	12.7 mm	203 mm/8"
Qcut 200 A	12.7 mm	203 mm/8"

## Qprep Aluminum oxide precision cut-off wheels

For precision cutting of ferrous materials, QPREP Aluminum oxide precision cut-off wheels are the optimal choice. This cut-off wheel is available in two different grain types (fine and coarse).

### PRODUCT ADVANTAGES

- | The dense structure of the disc allows a longer lifetime
- | Less wear and less heat between specimen and cut-off wheel

### RECOMMENDED APPLICATIONS

- | Suitable for a wide range of materials, especially various steel samples
- | Cutting of high alloy steel
- | Cutting of nitrided steel
- | Cutting of mounted samples possible

Item No.	Unit	Description		
<b>ALUMINUM OXIDE PRECISION CUT-OFF WHEELS</b>

## Qprep Diamond precision cut-off wheels

For cutting hard materials, QPREP Diamond precision cut-off wheels are the optimal choice, as they cut materials such as ceramics without smearing. The bond is made of bronze. The diamonds can be "dressed" to take full advantage of the cutting performance of the diamond particles again after a longer period of use.

### PRODUCT ADVANTAGES

- ▮ Diamond as abrasive enables cutting of hardest materials
- ▮ Separates hard material without smearing
- ▮ The dressing functionality of our QATM cut-off machines ensures that the diamonds always maintain maximum cutting performance

### RECOMMENDED APPLICATIONS

- ▮ Cutting hard and brittle materials such as ceramics and glass
- ▮ Cutting of mineral samples like rocks
- ▮ Cutting of specimens with brittle plasma coating

## Qprep CBN precision cut-off wheels

QPREP CBN precision cut-off wheels like the diamond precision cut-off wheels, are edged with a cubic boron nitride (CBN) abrasive in a bronze bond. The properties of CBN make it particularly suitable for composite and tough materials.

### PRODUCT ADVANTAGES

- | The best cutting performance when cutting soft and hard materials
- | Separates hard material without smearing
- | The dressing functionality of our QATM cut-off machines ensures that the CBN particles always maintain the highest cutting performance

### RECOMMENDED APPLICATIONS

- | Composites and materials with a combination of soft and hard materials
- | Ductile materials
- | Cutting hard ferrous materials

Item No.	Unit	Description
<b>CBN PRECISION CUT-OFF WHEELS BOND: BRONZE</b>		
		<b>Ø      Thickness      Arbor Size</b>

other diameters on request		

## Qprep Saw blade precision cut-off wheel

The QPREP Saw blade precision cut-off wheel is particularly suitable for cutting materials with a high tendency to smearing.

### PRODUCT ADVANTAGES

- | The best performance when cutting non-metallic material
- | Lower heat generation due to single engagement of the saw teeth during cutting
- | Since there is no binding of abrasives, the disc is odor and dust free

### RECOMMENDED APPLICATIONS

- | Separation of non-metallic materials
- | Separation of plastic materials
- | Separation of polymers e.g., carbon fiber reinforced polymers

Item No.	Unit	Description
<b>SAW BLADE PRECISION CUT-OFF WHEEL</b>		
		<b>Ø      Thickness      Arbor Size</b>
<b>• for plastics, non-ferrous metals</b>		
95009083	1 Pc.	150 mm      1.4 mm      30 mm (reduction ring 12.7 mm necessary)
01811035	1 Pc.	Reduction ring 12.7 mm to 30 mm

# Cutting

The process of cutting, specifically wet abrasive cutting, is essential for materialographic sectioning of samples. In this process, cut-off wheels of different material thicknesses, abrasive particles and bonds are used on a corresponding wet abrasive cutting machine. These bond types can be synthetic resin, rubber, or metal. For the abrasives, aluminum oxide, silicon carbide, diamond or CBN is used. These abrasive particles are enclosed in a bond matrix.

## PRODUCT ADVANTAGES

- I Low thermal influence on the specimen during the cutting process
- I Wet abrasive cutting achieves very fine surface finishes after cutting
- I Optimum cutting shortens the further preparation process

## AS A RULE, THE FOLLOWING PRINCIPLE APPLIES:

- I For hard materials, a cut-off wheel with soft bond is recommended.
  - ➔ This ensures fast breaking out of worn abrasive particles.
- I For medium-hard materials, a cut-off wheel with a medium-hard bond is recommended.
  - ➔ This ensures even breaking out of worn abrasive particles.
- I For soft materials, a cut-off wheel with hard bond is recommended.
  - ➔ This ensures slow breaking out of worn abrasive particles.

## CUT-OFF WHEELS

Cut-off machine	Arbor size	Wheel diameter (max.)
Brillant 230	32 mm	254 mm/10" 305 mm/12"

# Premium cut-off wheels

Significant properties for cut-off wheels are wear (i.e., abrasion resistance), long lifetime and cutting performance. Characteristics of the wheel composition are the abrasive used (aluminum oxide, silicon carbide, diamond, cubic boron nitride (CBN)) and the bond type (metal, resin or rubber). The goal of any cut is to separate the material with minimal deformation and temperature effect. For a clean cut, the abrasive particles and bond type of the cut-off wheel should be matched to the material being cut.

QPREP Premium cut-off wheels offer the optimal solution for a wide range of applications.

- | Achieve a fine cutting surface
- | Wide range of cut-off wheels for cutting all materials
- | The best cutting function fitting to the material
- | Low deformation and temperature during the cutting process
- | Very good cutting performance with long lifetime

The color coding of the premium cut-off wheels enables quick, visual assignment and identification of the several types:

## CUT-OFF WHEEL SELECTION ACCORDING TO MATERIAL HARDNESS

		Rubber bonded										
Type description	B	for high-speed steels, heat-treated steels, non-corrosive steels							400-700 HV

## Qprep Premium Silicon Carbide cut-off wheels

Due to the lower hardness of silicon carbide particles compared to aluminum oxide particles, these premium cut-off wheels are the optimal choice for cutting soft as well as non-ferrous materials.

### PRODUCT ADVANTAGES

- Optimized cutting performance for non-ferrous metals and ductile metals
- Long lifetime and low wear of the cut-off wheel

### RECOMMENDED APPLICATIONS

- QPREP Premium Silicon Carbide cut-off wheel **NF-A** are suitable for cutting soft and medium hard non-ferrous metals as well as hard non-metallic materials (glass, stone).
- QPREP Premium Silicon Carbide cut-off wheel **Ti-A** for cutting non-ferrous metals, Ti alloys and refractory metals

# Qprep Premium Aluminum Oxide cut-off wheels

QPREP Premium Aluminum Oxide cut-off wheels cover a wide range of materials from 30 HV to >650 HV.

## PRODUCT ADVANTAGES

- | Wide range of application for various materials with different hardness's
- | Long lifetime as well as low wear of the cut-off wheel
- | Premium abrasive particles enable the finest cutting surfaces, which shortens the following grinding steps
- | The synthetic resin bond enables even breaking out of blunt abrasive particles during the cutting process

## RECOMMENDED APPLICATIONS

- | Cutting of all materials
- | Cutting of polymers with the hard-bonded cut-off wheel **FS-A**
- | Cutting of very hard steels with the soft-bonded cut-off wheel **FS-E**

## Qprep Premium Diamond cut-off wheels

QPREP Premium Diamond cut-off wheels are used for hard materials (ceramics, glass fiber reinforced plastics, minerals and rocks, glass or similar). There are two different bond variants to choose from: metallic, in which the diamonds are usually bound in a bronze bond, or the bond with synthetic resin.

### PRODUCT ADVANTAGES

- | Two different bond types (bronze and resin) for a wide range of applications.
- | The dressing functionality of our QATM cut-off machines ensures that the diamonds always maintain maximum cutting performance
- | Long lifetime as well as low wear of the cut-off wheel

### RECOMMENDED APPLICATIONS

- | Cutting of ceramic materials as well as composites with bronze-bonded diamond premium cut-off wheels
- | Cutting of hard and brittle materials with resin-bonded diamond cutting discs
- | Cutting of brittle coating surfaces

Item No.	Unit	Description		
<b>PREMIUM DIAMOND CUT-OFF WHEELS BOND: BRONZE</b>

other diameters on request				

## Qprep Premium CBN cut-off wheels

QPREP Premium CBN cut-off wheels made of cubic boron nitride (CBN) provide a fine cutting surface for nickel and cobalt-based alloys. The high hardness as well as the high ductility of the CBN particles improve the cutting ability of the cut-off wheel with significantly less wear. The CBN abrasives in these discs maintain cutting performance over a longer period, which improves the cutting ability of the cut-off wheels.

### PRODUCT ADVANTAGES

- | The good thermal conductivity of CBN abrasives can dissipate heat generated during cutting much more effectively
- | Long lifetime as well as low wear of the cut-off wheel
- | The dressing functionality of our QATM cut-off machines ensures that the CBN particles always maintain the highest cutting performance

### RECOMMENDED APPLICATIONS

- | Cutting nickel and cobalt based alloys
- | For cutting very hard steels

Item No.	Unit	Description		
<b>PREMIUM CBN CUT-OFF WHEELS BOND: BRONZE</b>				
		Ø	Thickness	Arbor Size
<b>• for Nickel and Cobald based alloys</b>				
92002456	1 Pc.	250 mm	1.6 mm	32 mm

## Qprep Aluminum Oxide cut-off wheels

QPREP Aluminum Oxide cut-off wheels are to be used for varied materials depending on the type.

### PRODUCT ADVANTAGES

- Long lifetime as well as low wear of the cut-off wheel
- The synthetic resin bond enables even breaking out of blunt abrasive particles during the cutting process

### RECOMMENDED APPLICATIONS

- Type-I for cutting mild steel and cast materials
- Type-D for cutting medium-hard materials and case-hardened steel
- Type-F with a diameter of 235 mm and 400 mm are a supplement to the Premium Ti-A cut-off wheels

Item No.	Unit	Description
<b>ALUMINUM OXIDE CUT-OFF WHEELS</b>		
<b>BOND: RESIN</b>		
<b>Ø      Thickness      Arbor Size</b>		
<b>Type C</b>		
<b>• universal wheel for materials of high to very high hardness</b>		
92001550	10 Pcs.	235 mm    1.5 mm    32 mm

## Qprep Coolant and anti-corrosion agent

Optimum cooling is essential during cutting. Excessive heat generation during the cutting process damages the specimen as well as the cutting wheel. QPREP coolant and anti-corrosion agent help to dissipate the heat and remove chips at the cutting point. A corrosion inhibitor must be added to the coolant, otherwise there is a risk of oxidation on the cut-off surface of the specimen as well as on machine components.

### PRODUCT ADVANTAGES

- | QPREP coolant and anti-corrosion agent are suitable for all types of cut-off machines
- | QPREP ATM CoolCut is known for its environmentally and user-friendly handling
- | QPREP coolant and anti-corrosion agent minimize the risk of thermal damage and corrosion during the cutting process

### RECOMMENDED APPLICATIONS

- | For separating all and especially corrosion-sensitive materials
- | When cutting coated samples that have been coated in a salt bath, the QPREP Defoamer should be used
- | For cutting polymers and composites, the use of the QPREP coolant and anti-corrosion agent for plastics and composites is recommended
- | QPREP ATM-CoolAdd CU is an additive to the cooling lubricant for specific requirements when cutting specific materials

Item No.	Unit	Description
<b>ATM-COOLCUT, ENVIRONMENT- AND USER-FRIENDLY</b>		
<b>Mixing ratio 1:25 (4%) – 1:12.5 (8%) / refractometer: 2.0%/°Bx</b>

### RECOMMENDATION

## Qprep Accessories & Tools

For inspection as well as effective working with QPREP cut-off wheels and QPREP cooling and anti-corrosion agents, QATM offers accessories & tools.

Item No.	Unit	Description
<b>ACCESSORIES FOR MAINTENANCE AND CARE OF COOLANTS</b>		
<b>Maintenance and testing set</b>		
95007866	1 Set	Maintenance and testing set for anti-corrosion coolant (case with handheld refractometer, plastic cup for extraction of sample, test strips, thermometer)
<b>Accessories for maintenance and testing set</b>		
92005616	100 Pcs.	pH test strips
92005613	100 Pcs.	Nitrate test strips
92005614	100 Pcs.	Nitrite test strips
95007865	100 Pcs.	Water hardness test strips

<b>ACCESSORIES FOR MAINTENANCE AND CARE OF CUT-OFF MACHINES</b>		
<b>Corrosion protection- and care spray</b>		
95016408	400 ml	Corrosion protection- and care spray, fully synthetical, silicon-free corrosion protection oil, for metal surfaces (e.g. clamping vices)
<b>Anti-fog spray</b>		
95008900	100 ml	Anti-fog spray (prevents steaming up the viewing window by splash water)

<b>ACCESSORIES FOR CUT-OFF WHEELS</b>		
<b>Dressing stone</b>		
92002460	1 Pc.	Dressing stone for diamond cut-off wheels, CBN cut-off wheels and cup wheels

## Qprep Filter systems

During cutting, various residual materials are produced from the specimen (chips) and from the cut-off wheel (wear/tear). To prevent these residual materials from entering the cooling water / waste water system or the pump mechanism, the use of filter systems is required. A suitable filter system with the correct mesh size, filter material and dimension has a significant influence on the cleanliness of the coolant.

### PRODUCT ADVANTAGES

- Various QPREP filter systems for different cut-off machines, from precision machines to floor standing machines.
- QPREP filter systems protect the cutting machine and thus increase its lifetime.
- The different mesh sizes of the filters offer an application-oriented selection of the appropriate filter system for the corresponding recirculating cooling unit.

### RECOMMENDED APPLICATIONS

- The use of a filter system keeps the coolant significantly longer clean and prevents damage to the pump and machine.

# Consumables for mounting

# Hot mounting

Hot mounting is a process that involves compressing materialographic specimens in ground resin granules in a plane-parallel manner with the aid of a closed cylinder.

The hot mounting technique ensures high edge retention, provides an optimal edge protection. Due to the gap-free adhesion to the specimen surface it is particularly suitable for wet chemical etching after Polishing. With the Qpress 50 hot mounting press, even higher specimen throughputs can be efficiently hot mounted due to its modular design. For heat- or pressure-sensitive specimens, we recommend mounting using QPREP cold mounting media.

QPREP hot mounting materials are specifically chosen plastic granules consists of various base polymers.

## BENEFITS

- | Good edge retention
- | High degree of hardness of the mounting material
- | High plane parallelism
- | Easy sample marking by engraving or labelling

## PROPERTIES OF HOT MOUNTING MATERIALS

Mounting material	Recommended Application	Basis/ Filler	Hardness (Shore D)	Removal rate (grindability)
EPO BLACK	High edge retention, edge examination, medium-hard to hard materials	Epoxy resin/ mineral and glass fibre	93	very low
EPO-MAX	High edge retention, edge examination, medium-hard to hard materials, easy cleaning of mould and ram due to low adhesion	Epoxy resin/mineral	93	very low
DUROPLAST BLACK	Conductive, SEM-analysis, electrolytic polishing	Phenolic resin/ graphite	89	medium
THERMOPLAST	Transparent mounting, targeted preparation, good for padding, marking	Acrylic resin	86	medium
BAKELIT BLACK	Routine work, soft to medium-hard materials, good for padding	Phenolic resin/ wood flour and graphite	90	medium
BAKELIT GREEN	Routine work, soft to medium-hard materials, good for padding	Phenolic resin/ wood flour and magnesium oxide	90	medium
BAKELIT RED	Routine work, soft to medium-hard materials, good for padding	Phenolic resin/ wood flour and boric acid	90	medium

## Qprep EPO BLACK

QPREP EPO BLACK is a fine granular, epoxy resin based thermosetting hot mounting material.

### PRODUCT ADVANTAGES

- | Very low gap formation
- | High edge retention and plane parallelism
- | Contains a high filler content of glass and minerals for good machinability
- | Hardness (Shore D): 93
- | Removal rate: Very low

### RECOMMENDED APPLICATIONS

- | Routine applications
- | Edge examination
- | Mounting of medium-hard to hard materials

Item No.	Unit	Description
<b>HOT MOUNTING MATERIAL EPO BLACK</b>		
95011990	1 kg	EPO BLACK
95011991	5 kg	EPO BLACK
95011992	10 kg	EPO BLACK

## Qprep EPO-MAX

QPREP EPO MAX is an epoxy resin compound for hot mounting with high edge retention. It is optimized for low adhesion on mould and ram surfaces.

### PRODUCT ADVANTAGES

- | Very low gap formation
- | High edge retention and plane-parallelism
- | Easy Cleaning of mould and ram due to low adhesion
- | Contains mineral filler
- | Hardness (Shore D): 93
- | Removal rate: Very low

### RECOMMENDED APPLICATIONS

- | Edge examinations
- | Mounting of medium-hard to hard materials

Item No.	Unit	Description
<b>HOT MOUNTING MATERIAL EPO-MAX</b>		
95013811	1 kg	EPO-MAX
95013812	5 kg	EPO-MAX
95013813	10 kg	EPO-MAX

## Qprep DUROPLAST BLACK

QPREP DUROPLAST BLACK is an electrically conductive hot mounting material based on a phenolic resin compound. It is suitable for SEM examinations and electrolytic polishing.

### PRODUCT ADVANTAGES

- | Electroconductive
- | Contains graphite particles
- | Hardness (Shore D): 89
- | Removal rate: Medium

### RECOMMENDED APPLICATIONS

- | Scanning electron microscopy
- | Electrolytic polishing

Item No.	Unit	Description
<b>HOT MOUNTING MATERIAL DUROPLAST BLACK</b>		
95011993	1 kg	DUROPLAST BLACK
95011994	5 kg	DUROPLAST BLACK
95011995	10 kg	DUROPLAST BLACK

## Qprep THERMOPLAST

QPREP THERMOPLAST is a highly transparent hot mounting material consisting of acrylic resin.

### PRODUCT ADVANTAGES

- | High transparency
- | Suitable for filling up and marking
- | Hardness (Shore D): 86
- | Removal rate: Medium

### RECOMMENDED APPLICATIONS

- | Transparent mounting
- | Ideal for target preparations and sensitive specimen
- | Mounting of complex geometries and bulk solid materials

Item No.	Unit	Description
<b>HOT MOUNTING MATERIAL THERMOPLAST</b>		
95011996	1 kg	THERMOPLAST
95011997	5 kg	THERMOPLAST
95011998	10 kg	THERMOPLAST

## Qprep BAKELIT BLACK

QPREP BAKELIT BLACK is an all-purpose hot mounting material based on a phenolic resin compound. It is suitable for general materialographic applications.

### PRODUCT ADVANTAGES

- | Very convenient for filling in combination with other hot mounting material
- | Contains wood flour and graphite
- | Hardness (Shore D): 90
- | Removal rate: Medium

### RECOMMENDED APPLICATIONS

- | Routine mountings
- | Core structure examinations
- | Mounting of soft to medium-hard materials

Item No.	Unit	Description
<b>HOT MOUNTING MATERIAL BAKELIT BLACK</b>		
95011981	1 kg	BAKELIT BLACK
95011982	5 kg	BAKELIT BLACK
95011983	10 kg	BAKELIT BLACK

## Qprep BAKELIT GREEN

QPREP BAKELIT GREEN is an all-purpose hot mounting material based on a phenolic resin compound. It is suitable for general materialographic applications.

### PRODUCT ADVANTAGES

- | Very convenient for filling in combination with other hot mounting material
- | Contains wood flour and magnesium oxide
- | Hardness (Shore D): 90
- | Removal rate: Medium

### RECOMMENDED APPLICATIONS

- | Routine mountings
- | Core structure examinations
- | Mounting of soft to medium-hard materials

Item No.	Unit	Description
<b>HOT MOUNTING MATERIAL BAKELIT GREEN</b>		
95011987	1 kg	BAKELIT GREEN
95011988	5 kg	BAKELIT GREEN
95011989	10 kg	BAKELIT GREEN

# Qprep BAKELIT RED

QPREP BAKELIT BLACK is an all-purpose hot mounting material based on a phenolic resin compound. It is suitable for general materialographic applications.

### PRODUCT ADVANTAGES

- | Very convenient for filling in combination with other hot mounting material
- | Contains wood flour and boric acid
- | Hardness (Shore D): 90
- | Removal rate: Medium

### RECOMMENDED APPLICATIONS

- | Routine mountings
- | Core structure examinations
- | Mounting of soft to medium-hard materials

Item No.	Unit	Description
<b>HOT MOUNTING MATERIAL BAKELIT RED</b>		
95011984	1 kg	BAKELIT RED
95011985	5 kg	BAKELIT RED
95011986	10 kg	BAKELIT RED

## Qprep Accessories & tools for hot mounting

Depending on the shape of the specimen to be mounted, the chosen hot mounting material, and the objectives of the materialographic preparation QPREP's wide range of accessories and tools ensures the best possible analysis results.

- | Anti-stick silicone paste and spray to protect the mould and ram surfaces
- | Various clamps for aligning specimens with complex geometries
- | Funnel for clean and loss-free filling of the mounting resin into the press mould.

Item No.	Unit	Description
----------	------	-------------

### ACCESSORIES FOR HOT MOUNTING

92002660	90 ml	Silicon paste, anti-stick agent
92002661	200 ml	Silicon spray, anti-stick agent
92004441	1 Pc.	Brass brush for cleaning of hot mounting press
92002658	1 Pc.	Funnel for hot mounting material
92002715	1 Pc.	Square bottle with screw-top for approx. 1 ltr. mounting material
92002657	100 Pcs.	Angle adapter for angled polishing, 10°
92001716	10 Pcs.	Dosing spoon for hot and cold mounting material, 13 ml

### CLIP FOR ALIGNING THIN SAMPLES IN MOULD

92002662	100 Pcs.	Steel
92002663	100 Pcs.	Plastic, transparent
92002707	100 Pcs.	Plastic, black
92002708	100 Pcs.	Plastic, red
92002709	100 Pcs.	Plastic, grey

# Cold mounting

The term cold mounting covers all mounting methods that do not require the use of a hot mounting press. To create an optimal cold-embedded specimen, consider the following:

- ! **The specimen must not be affected or corroded by the resin selected for cold mounting.**
- ! **The specimen must be able to withstand the peak temperature of the mounting system.**
- ! **To prevent gap formation, the specimen surface must be free of dust and grease before mounting, so that the specimen can be well wetted with the mounting medium.**

QPREP cold mounting resins are available on methyl methacrylate or MMA-free and epoxy based. Acrylate or MMA-free based cold mounting resins are characterized by good removal rate, short curing times and good chemical resistance. Epoxy resins are used for mounting of porous and temperature sensitive materials. Furthermore, they are used when the lowest possible gap formation is intended.

## PROPERTIES OF COLD MOUNTING MATERIALS

Mounting Material	Recommended Application	Basis	Curing time	Curing temperature	Hardness (Shore D)	Removal rate (grindability)
KEM 15 plus	With high edge retention, edge examination, medium-hard to hard materials	Methyl methacrylate	approx. 25 min.	approx. 85-100 °C	85	very low
KEM 20	Transparent mounting (pressure vessel), targeted preparation	Methyl methacrylate	approx. 15 min.	approx. 100-120 °C	84	medium
KEM 30	Semi-transparent mounting (pressure vessel), routine work, soft to medium-hard materials	Methyl methacrylate	approx. 5 min.	approx. 95-110 °C	85	medium
KEM 35	Minimized gap formation, edge examination, medium-hard to hard materials	Methyl methacrylate	approx. 12 min.	approx. 85-100 °C	87	very low
TECHNOVIT 5000	SEM (Scanning electron microscopy), electrolytic polishing	Modified methyl methacrylate	approx. 10 min.	approx. 85-110 °C	91	very low
KEM 60	Universal usage	Tetrahydrofurfuryl-2-methacrylate	approx. 10 min.	approx. 95-110 °C	85	low
KEM 90	Mounting using vacuum, sensitive and brittle materials	Epoxy resin	approx. 16-24 h	Room temperature up to approx. 60 °C	79	high
KEM 92	Vacuum impregnation, brittle and heat sensitive materials, porous materials	Epoxy resin	approx. 12-13 h	Room temperature up to approx. 35 °C	81	medium
KEM 50 UV	For standard samples, soft to medium hard materials, targeted preparation	Modified methacrylate	approx. 60 s	approx. 90 °C	83	high

## Qprep KEM 15 PLUS

QPREP KEM 15 PLUS is a universally applicable two-component cold mounting material based on a modified polyester resin. Due to its very low shrinkage, it is particularly suitable for boundary layer investigations.

### PRODUCT ADVANTAGES

- | Very low shrinkage
- | High edge retention
- | Good chemical resistance
- | Good mechanical machinability
- | Easy dosage with enclosed measuring spoon
- | Curing temperature: approx. 85-100 °C
- | Curing time: approx. 25 min
- | Hardness (Shore D): 85
- | Removal rate: Very low

### RECOMMENDED APPLICATIONS

- | Edge examination
- | Mounting of medium-hard to hard materials
- | Curing by means of overpressure with pressure equipment possible, to minimize porosity and increase edge retention

Item No.	Unit	Description
<b>COLD MOUNTING MATERIAL KEM 15 PLUS</b>		
<b>Basis: Methyl methacrylate</b>		
<ul style="list-style-type: none"> <li>• <b>blue, opaque</b></li> <li>• <b>2-component system: powder + liquid (1.5:1 [Vol.-%])</b></li> </ul>		
95012019	1 Set	1 kg powder, 500 ml liquid, 40 mixing cups, 40 mixing sticks, 2 dosing spoons
95011628	1 kg	Powder
95011630	10 kg	Powder
95011629	500 ml	Liquid
95011631	5 l	Liquid

## Qprep KEM 20

QPREP KEM 20 is a universally applicable two-component cold mounting material based on a methyl methacrylate resin compound. Transparent embeddings can be realized when curing under overpressure.

### PRODUCT ADVANTAGES

- | Feasibility of transparent embeddings by means of pressure equipment
- | Good chemical resistance
- | Good mechanical machinability
- | Easy dosage with enclosed measuring spoon
- | Curing temperature: approx. 100-120°C
- | Curing time: approx. 15 min
- | Hardness (Shore D): 84
- | Removal rate: Medium

### RECOMMENDED APPLICATIONS

- | Target preparations
- | Mounting of soft to medium-hard materials

Item No.	Unit	Description
<b>COLD MOUNTING MATERIAL KEM 20</b>

## Qprep KEM 30

QPREP KEM 30 is a universal two-component cold mounting resin based on a methyl methacrylate resin compound. It is a fast-curing resin, which is particularly suitable for high sample throughput.

### PRODUCT ADVANTAGES

- | Semi-transparent
- | Good chemical resistance
- | Good mechanical machinability
- | Easy dosage with enclosed measuring spoon
- | Curing temperature: approx. 95-110°C
- | Curing time: approx. 5 min
- | Hardness (Shore D): 85
- | Removal rate: Medium

### RECOMMENDED APPLICATIONS

- | Routine testing with high sample throughput
- | Mounting of soft to medium-hard materials
- | Curing by means of overpressure with pressure equipment possible, to minimize porosity

Item No.	Unit	Description
<b>COLD MOUNTING MATERIAL KEM 30</b>

92004083	1 l	Liquid
92002540	2.5 l	Liquid

## Qprep TECHNOVIT 5000

Technovit 5000 is an electrically conductive cold mounting material based on a modified Methyl methacrylate compound. It is suitable for SEM examinations and electrolytic polishing.

### PRODUCT ADVANTAGES

- | Electroconductive
- | Contains copper particles
- | Curing temperature: approx. 85-110 °C
- | Curing time: approx. 10 min
- | Hardness (Shore D): 91
- | Removal rate: Very low

### RECOMMENDED APPLICATIONS

- | Scanning electron microscopy
- | Electrolytic polishing

Item No.	Unit	Description
<b>COLD MOUNTING MATERIAL TECHNOVIT 5000</b>		
<b>Basis: Modified methyl methacrylate</b>		
<ul style="list-style-type: none"> <li>• copper-brown, free of blowholes by using a pressure device</li> <li>• 2-component system: powder + liquid (20 g : 13 ml)</li> </ul>		
95004058	1 kg	Powder
95004059	500 ml	Liquid

### COLD MOUNTING MATERIAL TECHNOVIT 5000

#### Basis: Modified methyl methacrylate

- copper-brown, free of blowholes by using a pressure device
- 2-component system: powder + liquid (20 g : 13 ml)

95004058	1 kg	Powder
95004059	500 ml	Liquid

## Qprep KEM 60

QPREP KEM 60 is a universally applicable, mineral-filled, MMA-free two-component cold embedding resin. It is characterized by short curing time and good mechanical machinability.

### PRODUCT ADVANTAGES

- | Free of MMA
- | Good chemical resistance
- | Good mechanical machinability
- | Curing temperature: approx. 95-110°C
- | Curing time: approx. 10 min
- | Hardness (Shore D): 85
- | Removal rate: Low

### RECOMMENDED APPLICATIONS

- | Routine mounting
- | Very wide range of application
- | Curing by means of overpressure with pressure equipment possible, to minimize porosity

Item No.	Unit	Description
<b>COLD MOUNTING MATERIAL KEM 60</b>		
<b>Basis: Tetrahydrofurfuryl-2-methacrylate</b>		
<ul style="list-style-type: none"> <li>• red, MMA-free</li> <li>• 2-component system: powder + liquid (2:0.9 [weight-%])</li> </ul>		
95014004	1 Set	1 kg powder, 500 ml liquid, 40 mixing cups, 40 mixing sticks, 2 dosing spoons
95013184	1 kg	Powder
95013185	5 kg	Powder
95013187	500 ml	Liquid

## Qprep KEM 90

QPREP KEM 90 is a transparent two-component cold mounting material based on an epoxy resin. Due to its good flowability, it is well suited for the pre-potting of specimens with filigree and complex geometries.

### PRODUCT ADVANTAGES

- | Good transparency
- | Very low gap formation
- | Low viscosity
- | Suitable for vacuum infiltration
- | Curing temperature: RT to approx. 60°C
- | Curing time: 16-24 h
- | Hardness (Shore D): 79
- | Removal rate: High

### RECOMMENDED APPLICATIONS

- | Routine mounting
- | Applicable for a wide range of materials
- | Target preparations
- | Vacuum infiltration of porous material surface
- | Pre-potting of assembled printed circuit boards to fix electronic components prior to cutting.
- | Mounting of low hardness material

Item No.	Unit	Description
<b>COLD MOUNTING MATERIAL KEM 90</b>		
<b>Basis: Epoxy resin</b>		
<ul style="list-style-type: none"> <li>• transparent, suitable for vacuum infiltration</li> <li>• 2-components-system: resin + hardener (2:1 [weight-%])</li> </ul>		
95017315	1 Set	500 ml resin, 250 ml hardener, 40 mixing cups, 40 mixing sticks, 2 dosing spoons
92002484	500 ml	Resin
92002485	250 ml	Hardener

## Qprep Vacuum infiltration and pressure device

When cold mounting porous specimens it is purposeful to infiltrate them under vacuum, with a low viscosity mounting medium (epoxy resins). The QPREP infiltration set as well as QPREP infiltration device offer a solution for embedding under vacuum.

For transparent cold embedding using methyl methacrylate, these must be cured in a pressure device under positive pressure (2 - 2.5 bar). This increases the boiling point of the embedding material and suppresses the formation of gas bubbles during polymerization. The QPREP pressure unit is best suited for this purpose.

### PRODUCT ADVANTAGES

- | Infiltration of porous materials
- | Reinforcement of fragile materials
- | Clear/transparent embedding possible with methyl methacrylate

### RECOMMENDED APPLICATIONS

- | Infiltration set and infiltration device for embedding with epoxy resin (KEM 90 / 92)
- | Pressure device for embedding with methyl methacrylate (KEM 15, 20, 30, 35, 60 and Technovit 5000)

Item No.	Unit	Description
----------	------	-------------

### INFILTRATION SET

- for cold mounting and hardening using vacuum
- recommended for Epoxy resin KEM 90 / 92

Z6510000	1 Pc.	desiccator incl. non-return valve, vacuum pump, hose and pressure gauge
----------	-------	---

### INFILTRATION UNIT

- for cold mounting, pouring and hardening using vacuum
- recommended for Epoxy resin KEM 90 / 92

M6500001	1 Pc.	infiltration unit, 230 V/50 Hz, vacuum pressure 0.8 bar, W 330 x H 270 x D 300 mm (including desiccator with mechanic dosing and vacuum pump, rotating disc for 8 silicon mounting cups Ø 50 mm or 9 PTFE-mounting cups Ø 40 mm, 10 mixing cups)
		110 V/60 Hz on request

### PRESSURE EQUIPMENT

**Pressure equipment for bubble free hardening of methyl methacrylates (for embedding with KEM 15, 20, 30, 35, 60 and Technovit 5000)**

- compressed air required (approx. 6 bar)

95016569	1 Pc.	Pressure equipment, dimensions: B 340 x W340 x H255 mm
----------	-------	--

# UV mounting

If transparent embedding of a specimen within 1-5 minutes without high heat input or pressure is desired, light-curing embedding is essential. Single component mounting materials based on a modified acrylate are used here. Curing is conducted under UV light at a temperature of approx. 90°C. This method is quite easy to handle and even very small specimens can be fixed and ideally positioned within a very short time.

## Advantages

- | Very high sample throughput
- | Samples are cured in a very short time (with QATM Qmount within 60 seconds)
- | Transparent and colorless
- | Low curing temperature (approx. 90 °C)
- | Suitable for very small samples and temperature sensitive materials

## Qprep KEM 50 UV

QPREP KEM 50 UV is a light-curing, acrylic resin-based cold mounting material. It is ideally suited for target preparations and is usually used for routine specimens as well as soft to medium-hard materials with simple geometries. Curing is taken place by using the UV mounting device Qmount, which allows curing of the samples within 60 seconds using UV radiation of a very narrowly tolerated wavelength range (emission maximum at  $\lambda = 365\text{nm}$ ).

### PRODUCT ADVANTAGES

- | Clear, colorless liquid with honey-like viscosity
- | Very good transparency
- | Curing by means of UV-Light
- | No mixing necessary as it is a one-component system
- | Curing temperature: approx. 90°C
- | Curing time: 60s
- | Hardness (Shore D): 83
- | Removal rate: High

### RECOMMENDED APPLICATIONS

- | Routine mounting
- | Target preparations
- | Fixation of small components

Item No.	Unit	Description

## Qprep Accessories & tools for cold and UV mounting

The mixing of the different resin components as well as the exact positioning of your specimens influence the quality of your mounting. Therefore, QPREP supports with a wide range of tools and accessories for cold mounting. Mixing of the resin components, fixing and correct positioning of the samples in the cold mounting moulds can thus be realized reliably and safely.

### ACCESSORIES

- | Mixing beakers and spatulas
- | Mounting utilities
- | Dosing spoons
- | Steel- and plastic clips

### ACCESSORIES

Item No.	Unit	Description
92001715	100 Pcs.	Mixing cups, disposable, 180 ml

## Qprep Cold mounting moulds

Choosing a cold mounting mould of the correct size and suitable material the result of the mounting can be optimized. QPREP offers a variety of reusable and chemically resistant moulds of different sizes and materials for this purpose.

### Silicone rubber, round or rectangular, beveled edge

- | Flexibility of the material enables easy demoulding after curing
- | Thick-walled mould, therefore, not recommended for light curing
- | Without removable base

### Polypropylene, round

- | Semi-transparent, therefore suitable for light curing
- | With removable base for easy demoulding after curing

### Polyethylene, round

- | Opaque, therefore, not recommended for light curing
- | With removable base for easy demoulding after curing

### PTFE, beveled edge, round

- | Long period of usage
- | High strength, for long shape retention
- | Opaque, therefore not recommended for light curing
- | With removable base for easy demoulding after curing

# Solution Boxes

**QATM**  
QUALITY ASSURED

**ALL-IN  
SMART SOLUTIONS**

GET YOUR PERFECT RESULTS

## Qprep Solution Boxes

In addition to the necessary specialist knowledge, the correct selection of the media suitable for the sample material is essential for a successful preparation. For a secure start close to the application, the QATM solution boxes contain all the grinding and polishing media required for the preparation of a specific material. If the preparation recommendations described are observed, this enables an optimal result.

**19 different boxes for different materials are available for media in Ø250 mm and Ø300 mm.**

### QPREP SOLUTION BOXES INCLUDE:

- | A guide for the preparation of the selected material.
- | Consumables for grinding as well as polishing: Grinding disc, grinding paper, Diamond suspension and polishing cloth

### PRODUCT ADVANTAGES

- | Evaluated preparation guide
- | Consumables for preparation available in sufficient quantity
- | Simple instructions for laboratory workers

### RECOMMENDED APPLICATIONS

- | For unknown specimen preparation
- | Ideally suited for new customers as an introduction

# Consumables for grinding

# Grinding

Mechanical grinding is a machining process using bonded abrasive grains to level and smooth the specimen surface. This process is divided into three categories in materialography as follows:

Typically, silicon carbide (SiC), aluminum dioxide (Al<sub>2</sub>O<sub>3</sub>), silicon dioxide (SiO<sub>2</sub>), zirconium dioxide (ZrO<sub>2</sub>), diamond or cubic boron nitride (CBN) are used as abrasives. Particular attention must be paid here to low-deformation material removal and at the same time to keeping the number of preparation steps as low as possible. A wide range of QPREP grinding media is available for this purpose.

## Qprep Planar grinding stones

If highest stock removal with highest planarity in the shortest time is required, the use of a planar grinding stone in materialographic specimen preparation is essential. In combination with our powerful automatic Qgrid XL planar grinding machine or our grinding and polishing automat Qpol 300 BOT, even high sample throughputs can be efficiently planar ground.

### PRODUCT ADVANTAGES

- | Short machining time
- | Excellent planarity for all materials
- | Optimized removal rates with Qgrind XL stock removal monitoring
- | Ideal preparatory work for polishing on our Qpol polishing machine series

### RECOMMENDED APPLICATIONS

- | Primary material control with high sample throughput
- | Serial inspections

## Qprep Diamond cup grinder

If a specimen with parallel faces is desired after precision cutting the use of a diamond cup wheel for further processing is recommended. Used in our precision cutting machines Qcut 150 A and Qcut 200 A (coming soon) with vacuum specimen holder, the QPREP diamond cup grinder enable the user to achieve optimum planar parallelism with high surface quality and reproducibility.

### PRODUCT ADVANTAGES

- | Planar parallel sample preparation
- | Stock removal with high accuracy
- | Very high repeat accuracy

### RECOMMENDED APPLICATIONS

- | Target preparation
- | Defect analysis
- | Thin section technology
- | Petrographic examinations

Item No.	Unit	Description

# Grinding Discs

QPREP provides a comprehensive portfolio of grinding discs with different bond systems, grain types and grain sizes. This way always allows to find the best solutions for individual requirements. All abrasive elements are on a metal carrier. So they can be directly applied on the QPREP magnetic foil without further tools. The grinding elements have just minimal resilience and ensure a planar surface with high edge retention. By this, it will gain stock removal free of smearing and chipping. QPREP grinding discs realize short preparation times and have in parallel long life times. Thus, will importantly contribute to a sustainable and resource-saving process in materialography.

## PRODUCT ADVANTAGES

- | High endurance
- | High planarity
- | Sample preparation with high edge retention
- | Sustainable and eco-friendly

## Range of grinding and polishing systems

**FIXATION SYSTEM FOR GRINDING DISCS**

# Qprep Magnetic foil

For low resilience during grinding (or polishing) as well as best adhesion and easy handling of the QPREP GALAXY grinding discs (or polishing cloths), the QPREP magnetic foil is perfectly suited.

**PRODUCT ADVANTAGES**

- | Low resilience
- | One time application on the working disc of the machine
- | Long service life
- | Different magnet. field strengths

**RECOMMENDED APPLICATIONS**

- | For the use of all GALAXY grinding discs and polishing cloths
- | Frequent change of grinding discs and polishing cloths

## Qprep GALAXY diamond grinding disc

QPREP GALAXY diamond grinding discs are with specially arranged elements, which contains resin-bonded diamond grains, on a stainless-steel metal carrier equipped. They are used for planar and fine grinding of medium-hard and hard materials. The color-coded grinding discs cover the FEPA grain sizes P80 to P1000. The color coding for the individual grain size ranges can be found in the application table.

### PRODUCT ADVANTAGES

- | High stock removal
- | Short processing times
- | High planarity

### RECOMMENDED APPLICATIONS

- | Steel with medium and high hardness
- | Cast iron (CJS / CJL)
- | Composites
- | Hard metal
- | Glass

## Qprep POLARIS M diamond grinding disc

QPREP Polaris M is a grinding disc on a zinc-plated metal carrier for pre- and fine grinding of medium-hard materials. The back of the product is coated with a high-quality non-slip print. The grinding disc is equipped with diamonds bonded in medium-hard synthetic resin. The functional back print provides secure adhesion to the magnetic foil.

### PRODUCT ADVANTAGES

- | High stock removal
- | Particularly high planarity with high surface quality
- | Long life time

### RECOMMENDED APPLICATIONS

- | Metal materials of medium hardness < 500 HV
- | Polymer materials
- | Composites
- | Ceramics

## Qprep QUASAR diamond grinding disc

QPREP Quasar is a grinding disc on a zinc-plated metal carrier for planar- and pre grinding of hard materials. The back of the product is coated with a high-quality non-slip print. The grinding disc is equipped with diamonds bonded in hard epoxy resin. The functional back print provides secure adhesion to the magnetic foil.

### PRODUCT ADVANTAGES

- | High stock removal
- | Particularly high planarity with high surface quality
- | Very long life time

### RECOMMENDED APPLICATIONS

- | Hard ferrous materials
- | Nickel base-super alloys
- | Hard metals
- | Ceramics

Item No.	Unit	Description	
<b>QUASAR DIAMOND GRINDING DISCS</b>

## Qprep VEGA diamond grinding disc

QPREP Vega is a grinding disc on a zinc-plated metal carrier for planar and pre-grinding of hard materials. On the back side the product is coated with a high-quality non-slip print. The grinding disc is equipped with diamonds bonded in nickel. The functional back print provides secure adhesion to the magnetic foil.

### PRODUCT ADVANTAGES

- | High stock removal
- | Particularly high planarity
- | Very long life time

### RECOMMENDED APPLICATIONS

- | Hard ferrous materials
- | Composites
- | Ceramics
- | Rocks
- | Possible to grind unmounted samples

## Qprep CONTERO fine grinding discs

QPREP Contero S and H are general purpose fine grinding discs with a specially arranged inflexible grinding surface. The grinding elements consist of a reinforced composite matrix and are mounted on a stainless metal carrier. During the fine grinding process, diamond suspension is regularly fed to the disc, in this way the diamonds partially are implant in the functional surface. This leads to high stock removal rates and creates very low-deformation sample surfaces, which can be polished easily and efficiently afterwards.

### PRODUCT ADVANTAGES

- | High stock removal rate
- | Long life time
- | High edge retention

### RECOMMENDED APPLICATIONS

- | All-purpose usage
- | Routine testing with high sample throughput
- | Edge examinations
- | Layer typography characterization
- | For use with diamond grain size: 15 / 9 / 6 µm

Item No.	Unit	Description	
<b>CONTERO S FINE GRINDING DISCS</b>

# Grinding papers and foils

As an alternative to QPREP grinding discs, specimen preparation is also possible using QPREP grinding papers and foils. These differ in the type of carrier material and the possibility of the fixation systems to be used (double-sided adhesive carrier, X-Tap, Quick-Tap).

## Grinding papers:

- | Foiled back, carrier material paper
- | Self-adhesive back, carrier material paper
- | Paper back, carrier material paper

## Grinding foils:

- | Back foil, carrier material foil

**FIXATION SYSTEM FOR GRINDING FOILS AND PAPERS WITH FOIL BACKING**

## Qprep Adhesive carrier disc

The QPREP adhesive carrier is characterized by a nano-surface, which ensured good adhesion and easy removal of the grinding medium.

**PRODUCT ADVANTAGES**

- | No glue backing, therefore no glue residues
- | Good adhesion to work disc as well as good adhesion to grinding paper and grinding foil
- | Easy removal and repositioning of grinding paper and grinding foil

**RECOMMENDED APPLICATIONS**

- | For direct application to the working disc
- | For use with grinding paper and grinding foil

## Qprep Silicon carbide grinding foils

QPREP silicon carbide grinding foils can be used individually and are ideally suited for a wide range of varied materials. They offer a high degree of flexibility, especially for frequently changing material variants. Furthermore, the foils are ideally suited for the "Vakujet" vacuum fixation in the QATM automatic grinding and polishing machine Qpol 300 Bot. QPREP silicon carbide grinding foils are available in diameters of 200 / 250 / 300 / and 350 mm and in 8 different grain sizes.

### PRODUCT ADVANTAGES

- | Suitable for vacuum fixation
- | Particularly high planarity
- | No curling
- | Tear and water resistant, so weakening during the grinding process can be excluded
- | Low resilience
- | Multiple uses possible in connection with QPREP adhesive carrier disc

### RECOMMENDED APPLICATIONS

- | All-purpose usage
- | Suitable for planar, pre- and fine grinding steps due to different grain sizes

## Qprep Silicon carbide grinding paper with foil backing

Silicon carbide grinding paper with foil backing can be used individually and are ideally suited for a wide range of varied materials. They offer a high degree of flexibility, especially for frequently changing material variants. Furthermore, the foiled paper enables the use of the "Vakujet" vacuum fixation in the QATM automatic grinding and polishing machine Qpol 300 Bot. QPREP silicon carbide grinding paper with foil backing is available in diameters of 200 / 250 / 300 / and 350 mm and in 12 different grain sizes.

### PRODUCT ADVANTAGES

- | Suitable for vacuum fixation
- | Directionally oriented applied abrasive grains with homogeneous distribution for a high cutting effect and efficient material removal
- | Ideally suited for the QPREP adhesive carrier disc
- | 12 grain sizes for a wide range of applications

### RECOMMENDED APPLICATIONS

- | All-purpose usage
- | Suitable for planar, pre- and fine grinding steps due to different grain sizes

**FIXATION SYSTEM FOR SELF-ADHESIVE GRINDING PAPER**
**Qprep X-Tap**

The QPREP X-Tap is ideally suited for fast and residue-free attachment of self-adhesive grinding papers and polishing cloths. This special attachment system offers minimal impact elasticity and can be applied either directly to the work disc or as QPREP GALAXY X-Tap with metal backing plate to the QPREP magnetic foil.

**PRODUCT ADVANTAGES**

- | Quick change of self-adhesive grinding paper or self-adhesive polishing cloths without adhesive residues
- | Low resilience, due to the thin and solid structure of the QPREP X-Tap
- | Easier cleaning compared to adhesive carrier disc

**RECOMMENDED APPLICATIONS**

- | Preparations with high edge sharpness
- | Carrier plate for self-adhesive grinding paper and self-adhesive polishing cloths

## Qprep Silicon carbide grinding papers, self-adhesive

Self-adhesive QPREP silicon carbide grinding papers can be used individually and are ideally suited for a wide range of varied materials. They offer a high degree of flexibility, especially for frequently changing material variants. The use of the QPREP X-Tap fixation system allows efficient and non-residual changing of the grinding paper between the different grinding stages. Self-adhesive QPREP silicon carbide grinding paper is available in diameters of 200 / 250 / and 300 mm and in 13 different grain sizes.

### PRODUCT ADVANTAGES

- | Directionally oriented applied abrasive grains with homogeneous distribution for a high cutting effect and efficient material removal
- | Very high adhesion on the fixation system
- | Low resilience in conjunction with QPREP X-Tap

### RECOMMENDED APPLICATIONS

- | All-purpose usage
- | Suitable for planar, pre- and fine grinding steps due to different grain sizes

## Qprep Zirconia alumina grinding papers, self-adhesive

QPREP Zirconia alumina grinding papers are high-performance grinding papers with a long lifetime for planar and pre-grinding. The zirconia alumina grain used constantly releases new cutting surfaces during the grinding process and enables efficient stock removal even at high contact forces. The grinding paper is free of silicon carbide and is therefore also suitable for sample preparation for

optical emission spectrometry (spectral analysis OES). QPREP zirconia alumina grinding paper is available in diameters of 200 / 250 / and 300 mm and in 3 different pre-grinding grit sizes.

### PRODUCT ADVANTAGES

- Long lifetime
- Very high stock removal
- Low resilience in conjunction with QPREP X-Tap

### RECOMMENDED APPLICATIONS

- Planar and pre-grinding of larger specimen cross-sections
- Sample preparation for spectral analysis

**FIXATION SYSTEM FOR SILICON GRINDING PAPERS WITHOUT ADHESIVE/FOIL BACKING**

## Qprep Clamping Ring

The QPREP clamping ring is made of plastic and allows grinding papers without adhesive / foil backing to be attached directly to the working disc. This ensures very low resilience and minimizes edge rounding during the grinding process. For changing the grinding paper, the clamping ring must be re-attached each time.

Item No.	Unit	Description

**FIXATION SYSTEM FOR SILICON GRINDING PAPERS WITHOUT ADHESIVE/FOIL BACKING**

## Qprep Quick-Tap

The reusable fast and time saving fixation system for plain backed grinding paper. As an alternative to the clamping ring and adhesive film, the innovative QPREP Quick-Tap is ideally suited for fixing grinding paper without adhesive/foil backing. Designed to be reusable, the thin layer of our new innovative fixation system resists high shear forces and ensures that the plain backed paper adheres securely to the Quick-Tap. Like all new Galaxy products, the Quick-Tap features the Qprep Antislip backside for secure retention of the Qprep magnetic film.

**PRODUCT ADVANTAGES**

- | Optimized adhesion
- | Low impact elasticity
- | Reduction of pencil effect and edge rounding
- | Possibility to position the specimen holder beyond the edge of the grinding paper during semi-automatic and automatic specimen preparation
- | Sustainable and resource-saving compared to using grinding paper with adhesive/foil backing
- | Allows hundreds of paper changes

**RECOMMENDED APPLICATIONS**

- | For use with grinding paper without adhesive/foil backing
- | Quick and easy as well as repeated fixation of grinding paper
- | For direct attachment to magnetic foil

## Qprep Silicon carbide grinding papers without adhesive/foil backing

QPREP silicon carbide grinding papers without adhesive/foil backing can be used individually and are ideally suited for a wide range of varied materials. They offer a high degree of flexibility, especially for frequently changing material variants. The grinding paper without adhesive/foil backing can be fixed directly with the QPREP Quick Tap (to the work disc or magnetic foil) or with the QPREP clamping ring to the work disc. Both ensure low resilience during the grinding process. QPREP silicon carbide grinding paper without adhesive/foil backing is available in diameters of 200 / 230 / 250 and 300 mm and in 15 different grain sizes.

### PRODUCT ADVANTAGES

- Directionally oriented applied abrasive grains with homogeneous distribution for a high cutting effect and efficient material removal
- Low resilience

### RECOMMENDED APPLICATIONS

- All-purpose usage
- Suitable for planar, pre- and fine grinding steps due to different grain sizes

## Qprep Grinding papers for Qpol 30

QPREP grinding papers for mobile grinding and polishing equipment are mainly used in mobile materialography rugged field conditions and are available as alumina grinding papers with a Velcro fastener on the back or as silicon carbide grinding papers with an adhesive backing. Both fasteners enable efficient changing of the sandpaper even under rugged field conditions.

### PRODUCT ADVANTAGES

- | Targeted grinding of smallest areas without influencing surrounding sample areas
- | Easy change of grinding paper

### RECOMMENDED APPLICATIONS

- | Mobile component-materialography
- | Deburring samples of complex geometries

Item No.	Unit	Description
----------	------	-------------

## Notes

# Qprep Grinding belts for Qgrind 100

QPREP grinding belts can be used very well for manual pre-grinding and deburring. They are waterproof and very robust for wet grinding with the Qgrind 100.

### PRODUCT ADVANTAGES

- | Waterproof
- | High robustness
- | High stock removal

### RECOMMENDED APPLICATIONS

- | Pre-grinding and deburring
- | Preparations for macro etching for weld testing

# Consumables for polishing

# Polishing

The polishing of the materialographic specimen serves, similar like grinding and after the grinding step, to remove the deformation introduced into the material. For this purpose, the unbound abrasive/grain is applied to special polishing cloths in gradually finer grain sizes. A distinction is made between three polishing processes with different polishing media:

A wide range of QPREP polishing media, lubricants and polishing cloths is available for this purpose.

## Diamond Suspension

QPREP diamond suspensions are the polishing product of choice for materialographic preparations. The range of different chemical bases (water, alcohol, or oil) allows scratch-free polishing, depending on the application.

**QPREP diamond suspensions are characterized by**

- ! **A narrow tolerance grain size distribution for a uniform scratch pattern.**
- ! **The optimized diamond concentration for high removal rate and time-saving polishing.**
- ! **Suitable for use with all materials.**

The abrasive used is (industrial) diamond, which is divided into monocrystalline and polycrystalline, since different levels of material removal rate are achieved.

### Polycrystalline (industrial) diamonds:

It consists of a multi-crystal, which breaks into smaller components when used, thus repeatedly creating new cutting edges (self-sharpening effect). This results in a high material removal rate and time-optimized polishing results.

### Monocrystalline (industrial) diamonds:

It consists of a single crystal that breaks into small slices like a block when used. There is no self-sharpening effect as with polycrystalline diamonds. Due to this, a more material-friendly but also more time-consuming removal rate is achieved during polishing.

QPREP diamond suspensions are used in combination with a lubricant based on water, alcohol, or oil. The right mixing ratio between suspension and lubricant must be observed to achieve correct polishing results. Alternatively, QATM offers the QPREP DIA-Complete All-In-One diamond suspension. It contains the lubricant in an optimized ratio, which eliminates the need for manual dosing and mixing of suspension and lubricant.

## Qprep DIA-COMPLETE Poly

QPREP DIA-Complete Poly (polycrystalline) is an all-in-one diamond suspension that is used for a wide range of materials.

### PRODUCT ADVANTAGES

- | High material removal rate
- | Easy handling
- | Optimally adjusted ratio of suspension and lubricant
- | Process reliable and repeatable polishing results
- | Water based (eco-friendly)
- | Closely tolerated grain size

### RECOMMENDED APPLICATIONS

- | All Material besides water-sensitiv materials
- | Soft to hard materials
- | Manual as well as semi and fully automatic preparation

## Qprep DIA-COMPLETE Mono

QPREP DIA-Complete Mono (monocrystalline) is an all-in-one diamond suspension that is used for a wide range of materials.

### PRODUCT ADVANTAGES

- | Gentle material removal rate
- | Easy handling
- | Optimally adjusted ratio of suspension and lubricant
- | Process reliable and repeatable polishing results
- | Water based (eco-friendly)
- | Closely tolerated grain size

### RECOMMENDED APPLICATIONS

- | All Material besides water-sensitiv materials
- | Soft to hard materials
- | Manual as well as semi and fully automatic preparation

## Qprep Diamond suspension polycrystalline

QPREP diamond suspensions are characterized by the narrow tolerance grain size as well as the optimized concentration of polycrystalline diamonds.

### PRODUCT ADVANTAGES

- | High material removal rate
- | Water based (eco-friendly)
- | Closely tolerated grain size

### RECOMMENDED APPLICATIONS

- | All Material besides water-sensitiv materials
- | Soft to hard materials
- | For manual fine dosing with lubricant

## Qprep Diamond suspension monocrystalline

QPREP diamond suspensions are characterized by the narrow tolerance grain size as well as the optimized concentration of monocrystalline diamonds.

### PRODUCT ADVANTAGES

- | Gentle material removal rate
- | Water based (eco-friendly)
- | Closely tolerated grain size

### RECOMMENDED APPLICATIONS

- | All Material besides water-sensitiv materials
- | Soft to hard materials
- | For manual fine dosing with lubricant

## Qprep Diamond suspension (alcohol-based / oil-based)

For polishing water-sensitive materials, QPREP diamond suspensions based on alcohol or oil are used. These have the same excellent polishing properties as the other diamond suspensions.

### PRODUCT ADVANTAGES

- | Anticorrosive
- | High lubricity with ductile materials
- | Closely tolerated grain size

### RECOMMENDED APPLICATIONS

- | All materials especially materials prone to corrosion
- | Soft to hard materials
- | For manual fine dosing with lubricant

## Qprep Spray nozzle

The QPREP Spray nozzle is suited for optimum fine dispersion of suspension and lubricant on the polishing cloth during manual polishing.

Item No.	Unit	Description
<b>SPRAY NOZZLE</b>		
<b>Description</b>		
<ul style="list-style-type: none"> <li>• for diamond suspensions of all grain sizes</li> <li>• for 250 ml, 500 ml and 1 L bottles</li> </ul>		
95016723	1 Pc.	Spray nozzle, hose length approx. 160 mm

## Qprep Qdoser ONE dosing system for suspensions

The Qdoser ONE dosing system is an easy-to-use solution for manual or semi-automatic polishing processes. QATM's standard suspension and lubricant bottles can be quickly screwed on the dosing attachment. The dosing volume is closely and continuously controlled with an adjusting screw. The system can be applied with the Qdoser ONE holder to the polishing heads Qpol GO and ECO. If used with manual grinding/polishing machines, the Qdoser ONE stand with suction cups can be placed on the machines.

### PRODUCT ADVANTAGES

- | Dosing attachment for standard and suspension bottles
- | Adjustable dosing volume
- | Can be freely positioned with stand
- | Can be screwed to polishing heads Qpol GO and ECO

Item No.	Unit	Description
<b>QDOSER ONE DOSING SYSTEM FOR SUSPENSIONS</b>		
<b>Description</b>		
Z5631015	1 Pc.	Qdoser ONE basic module
Z5631014	1 Pc.	Qdoser ONE holder
Z5631016	1 Pc.	Qdoser ONE stand

## Qprep Diamond spray, paste and stick

As an alternative to the diamond suspension as a polishing product, QATM also offers QPREP diamond spray, paste and stick. These are particularly well suited for commissioning new polishing cloths. When using these, make sure that the QPREP lubricants are also used.

### PRODUCT ADVANTAGES

- | Diamonds attach better to the polishing cloth due to non-liquid carrier medium
- | Closely tolerated grain size
- | High stock removal rate

### RECOMMENDED APPLICATIONS

- | Commissioning of new polishing cloths for higher percentage of bonded diamonds on the polishing cloth

Item No.	Unit	Description

## Qprep Diamond lubricants

QPREP lubricants (diamond lubricants) based on water, alcohol and oil are used with the polishing products mentioned above. The lubricant ensures even distribution of the polishing product on the polishing cloth. In addition, it also serves to cool the cloth and sample while polishing.

**QPREP diamond lubricant yellow** (water-based) is especially environmentally friendly and provides an even lubricating film on the polishing cloth.

**QPREP diamond lubricant blue** (alcohol-based) has a higher viscosity and surface tension. Due to this, the lubricant remains longer on the polishing cloth. This allows a more economical dosage.

**QPREP diamond lubricant light blue** (alcohol-based) has a low viscosity and surface tension due to its high alcohol content. This makes it especially suitable for materials which are prone to corrosion. However, the lubricant must be dosed more frequently due to the low viscosity.

**QPREP Diamond Lubricant Red** (oil based) is an oil - water emulsion and due to its higher viscosity ensures a consistently stable lubricating film on the polishing cloth. Optimal for heat as well as water sensitive materials.

Item No.	Unit	Description
<b>DIAMOND LUBRICANT</b>		
		<b>Color      Characteristics</b>

## Qprep Fine polishing suspensions

QPREP fine polishing suspensions are the polishing products of choice for the most demanding polishing requirements. This involves chemical mechanical polishing using silicon dioxide or aluminum oxide.

### PRODUCT ADVANTAGES

- | Highest surface qualities
- | Removal of all deformation with vibration polishing
- | Polishing/removing scratches in the range of 0.1µm to 0.05µm

### RECOMMENDED APPLICATIONS

- | Detailed microstructure analysis
- | Very soft or very hard and ductile materials

Item No.	Unit	Description

# Polishing cloths

The choice of the right polishing cloth is essential for a low-deformation and relief-free polish. The cloth material (silk, artificial silk, man-made fibers, wool fabric, felt, flocked or foamed synthetic fabrics) and the corresponding resilience are a crucial criterion in the selection of the polishing cloth. The possible fixation systems (GALAXY metal disc with magnetic foil or X-Tap) also differ.

At the beginning, **pre-polishing**, polishing cloths with a low resilience (hard cloth material) are selected, as these support the retention of edge sharpness. In comparison to the further polishing steps, a higher material removal is achieved during pre-polishing due to longer polishing times.

Polishing cloths with different resilience are used for **intermediate polishing**. The objective of the polish and the material to be polished are always the determining factors for the selection of a suitable polishing cloth.

**Final polishing** is performed on polishing cloths with a high resilience with short polishing times to avoid relief formation. Final polishing can either be done with diamond suspensions (3 µm - 0.5 µm) or, for the highest demands for analysis, by using fine polishing suspensions (oxide polish 0.1 µm - 0.05 µm) or (alumina 1 µm - 0.3 µm).

**The selection of QPREP polishing cloths offers a suitable cloth for every polishing step, which, with the matching QPREP diamond suspension, ensures excellent polishing results.**

**FIXATION SYSTEM FOR GALAXY POLISHING CLOTHS**

# Qprep Magnetic foil for GALAXY polishing cloths

For low resilience during (grinding) / polishing as well as best adhesion and easy handling of the QPREP GALAXY (grinding discs) / polishing cloths, the QPREP magnetic foil is perfectly suited.

**PRODUCT ADVANTAGES**

- | Low resilience
- | One time application on the working disc of the machine
- | Long service life
- | Different magnet. field strengths

**RECOMMENDED APPLICATIONS**

- | For the use of all GALAXY grinding discs and polishing cloths
- | Frequent change of grinding discs and polishing cloths

## Qprep GALAXY polishing cloths

QPREP GALAXY polishing cloths offer the right cloth material for all materials and analysis purposes. Low resilience is provided by our GALAXY carrier disc.

### PRODUCT ADVANTAGES

- | Faster application because there is no need to glue on the polishing cloth
- | Low resilience due to metallic carrier plate
- | Easier handling due to grip tabs on the carrier plate

### RECOMMENDED APPLICATIONS

- | Process-reliable and reproducible polishing results
- | Use with GALAXY magnetic foil

Item No.	Unit	Description
----------	------	-------------

### GALAXY POLISHING CLOTH WITH METAL BACK

#### Description Ø

#### GALAXY – ALPHA

- Suitable for pre-polishing
- Very hard, perforated chemical fiber cloth
- For ceramics, hard metal, steel, grey cast iron, aluminum
- High lifetime and stock removal
- For use with diamond grain size: 15/9 µm
- Fixation system: Magnetic foil

95001407	5 Pcs.	Alpha 200 mm
95001408	5 Pcs.	Alpha 250 mm
95001409	5 Pcs.	Alpha 300 mm
95013994	5 Pcs.	Alpha 350 mm

#### GALAXY – BETA

- Suitable for pre-polishing
- Hard synthetic cloth
- Materials with high hardness, steel, grey cast iron, hard metal, ceramics
- For use with diamond grain size: 15/9/6 µm
- Fixation system: Magnetic foil

95001410	5 Pcs.	Beta 200 mm
95001411	5 Pcs.	Beta 250 mm
95001412	5 Pcs.	Beta 300 mm
95013995	5 Pcs.	Beta 350 mm

#### GALAXY – DELTA

- Suitable for pre- & intermediate polishing
- Medium hard silk cloth
- C-steels, precious metal, plastics [CFK, GFK], coatings, aluminum
- For use with diamond grain size: 9/6/3 µm
- Fixation system: Magnetic foil

**FIXATION SYSTEM FOR SELF-ADHESIVE POLISHING CLOTHS**

The QPREP X-Tap is ideally suited for fast and residue-free attachment of self-adhesive grinding papers and polishing cloths. This special attachment system offers minimal impact elasticity and can be applied either directly to the work disc or as QPREP GALAXY X-Tap with metal backing plate to the QPREP magnetic foil.

**PRODUCT ADVANTAGES**

- | Quick change of self-adhesive grinding paper or self-adhesive polishing cloths without adhesive residues
- | Low resilience, due to the thin and solid structure of the QPREP X-Tap
- | Easier cleaning compared to adhesive carrier disc

**RECOMMENDED APPLICATIONS**

- | Preparations with high edge sharpness
- | Carrier plate for self-adhesive grinding paper and self-adhesive polishing cloths

Item No.	Unit	Description
<b>X-TAP</b>

## Qprep Polishing cloths, self-adhesive

QPREP polishing cloths offer the right cloth material for all materials and analysis purposes.

### PRODUCT ADVANTAGES

- | Ideal for polishing in combination with the media carrier for the fully automatic Qpol 250 BOT as well as with the X-Tap system
- | Optimized adhesive backing ensures uniform fixing over the entire surface on the fixation system and realized no slipping or detachment of the polishing cloth

### RECOMMENDED APPLICATIONS

- | For use with X-Tap system
- | For use with media carrier plate (Qpol 250 BOT)

Item No.	Unit	Description
----------	------	-------------

### POLISHING CLOTHS, SELF-ADHESIVE

#### Description Ø

#### ALPHA – Polishing cloth

- Suitable for pre-polishing
- Very hard, perforated chemical fiber cloth
- For ceramics, hard metal, steel, grey cast iron, aluminum
- High lifetime and stock removal
- For use with diamond grain size: 15/9 µm
- Fixation system: X-Tap

92002555	5 Pcs.	Alpha 200 mm
92002564	5 Pcs.	Alpha 250 mm
92002573	5 Pcs.	Alpha 300 mm
95016029	5 Pcs.	Alpha 350 mm

#### BETA – Polishing cloth

- Suitable for pre-polishing
- Hard synthetic cloth
- Materials with high hardness, steel, grey cast iron, hard metal, ceramics
- For use with diamond grain size: 15/9/6 µm
- Fixation system: X-Tap

95006571	5 Pcs.	Beta 200 mm
95006572	5 Pcs.	Beta 250 mm
95006573	5 Pcs.	Beta 300 mm
95016030	5 Pcs.	Beta 350 mm

#### DELTA – Polishing cloth

- Suitable for pre- & intermediate polishing
- Medium hard silk cloth
- C-steels, precious metal, plastics [CFK, GFK], coatings, aluminum
- For use with diamond grain size: 9/6/3 µm
- Fixation system: X-Tap

92008801	5 Pcs.	Delta 200 mm
92008802	5 Pcs.	Delta 250 mm
92008803	5 Pcs.	Delta 300 mm

all polishing cloths also available for Qpol 30 (Ø 30 mm)

## Qprep Media carrier plate

During preparation using the Qpol 250 BOT, the grinding wheels/papers and polishing cloths are placed on a media carrier plate specially designed for the machine.

### PRODUCT ADVANTAGES

- Quick exchange/selection of grinding papers / polishing cloths possible due to up to 16 stored media carrier plates
- Secure fixing of the media carrier plate by means of vacuum suction (Vakujet)

### RECOMMENDED APPLICATIONS

- Fully automatic preparation using Qpol 250 BOT

Item No.	Unit	Description
<b>MEDIA CARRIER PLATE</b>		
Ø		
• for grinding and polishing robot Qpol 250 BOT (SAPHIR X-Change)		
95005867	1 Pc.	250 mm

## Qprep Filter inserts

During grinding and polishing, various fine residual materials are produced. These originate from the sample (chips), the grinding wheel (wear/abrasion) as well as parts of the polishing media. To avoid entering of the wastewater system and the pumps these residuals have to be filtered. Suitable filter fleeces with the correct mesh sizes in the sedimentation tank prevents damage to the machines and ensure a safe process.

Item No.	Unit	Description	Dimensions	Mesh size
<b>FILTER INSERTS</b>				
<b>Filter inserts for settling tank (until year of construction 2012)</b>

<b>ETCHANTS</b>		
<b>Description</b>		
<b>Ready-to-use etching solutions for microstructural contrasting</b>		
95014346	500 ml	VisiPro-I Etchant for visualizing the former austenitic grain boundaries (for quenched or tempered low-alloy quenched and tempered steels and case-hardened steels)
95014347	1 l	VisiPro-I Etchant for visualizing the former austenitic grain boundaries (for quenched or tempered low-alloy quenched and tempered steels and case-hardened steels)
95014348	500 ml	VisiPro-II Etchant for visualizing the former austenitic grain boundaries (for quenched or tempered low-alloy quenched, tempered case hardening steels and anti-friction bearing steels)
95014349	1 l	VisiPro-II Etchant for visualizing the former austenitic grain boundaries (for quenched or tempered low-alloy quenched, tempered case hardening steels and anti-friction bearing steels)
95006393	1 l	Barker reagent (for Aluminum grain boundaries)
92002601	1 kg	Heyn Etchant (for steel, phosphorous segregations, macro etching, copper alloys, brass)
95000508	500 ml	Copper A, chloride version (for Cu, Cu-alloys, brass and bronze)
92002602	1 kg	Adler Etchant (for steel, weldings, macro etching)
92002603	1 l	Alcoholic picric acid, 5% Picral (for steel, martensite)
92002597	1 l	Alcoholic nitric acid, 3% Nital (for unalloyed and low alloyed steels)
92002596	1 l	Alcoholic nitric acid, 1% Nital (for unalloyed and low alloyed steels)
92002605	1 kg	V2A Etchant (for austenitic steels), application with approx. 60°
92002606	250 g	Additive for V2A-etchant
92002678	1 kg	Sodium hydroxide solution (for aluminum alloys)
92004240	1 kg	Oberhoffer Etchant (for steel, segregations, flow-lines, macro/micro etching)
92004492	1 kg	Kroll Etchant (for aluminum alloys, titanium)
92004493	1 kg	Fry Etchant (for steel, macro/micro etching, flow lines)
92004222	1 kg	CU2 etching fluid (copper, copper with sulfide and oxide inclusions)
92002750	1 kg	Sodium picrate (for cementite detection in steel)
95002313	1 l	Kalling 1 Etchant (for martensitic stainless steel)
95002347	1 kg	Kalling 2 Etchant (for nickel, nickel alloys, stainless steels, nickel-copper alloys)
95002434	1 l	Color etching according to Klemm I (for low carbon steels), stock solution
95002390	20 g	Potassium bisulfite for Klemm I
95002435	1 l	Color etching according to Klemm II (copper, solder joints), stock solution
95002391	50 g	Potassium bisulfite for Klemm II
95002436	1 l	Bechet-Beaujard Etchant, prior austenite grain boundaries
95002408	1 kg	Murakami Etchant (for hard metals, molybdenum/molybdenum alloys, chromium alloys, tungsten and tungsten alloys)

Desiccator cabinet (95012025)

# Consumables for hardness testing

# Hardness test blocks

Calibrated and certified hardness test blocks are an important part of the hardness testing. QPREP hardness test blocks fulfill the requirements for testing according to following standards:

- | **DIN EN ISO 6506**  
(Metallic materials; Brinell hardness test)
- | **DIN EN ISO 6507**  
(Metallic materials; Vickers hardness test)
- | **DIN EN ISO 6508**  
(Metallic materials; Rockwell hardness test)
- | **DIN EN ISO 4545**  
(Metallic materials; Knoop hardness test)
- | **ASTM (E10, E18, E384).**

These are essential for indirect calibration and periodic verification, as well as the results documentation.

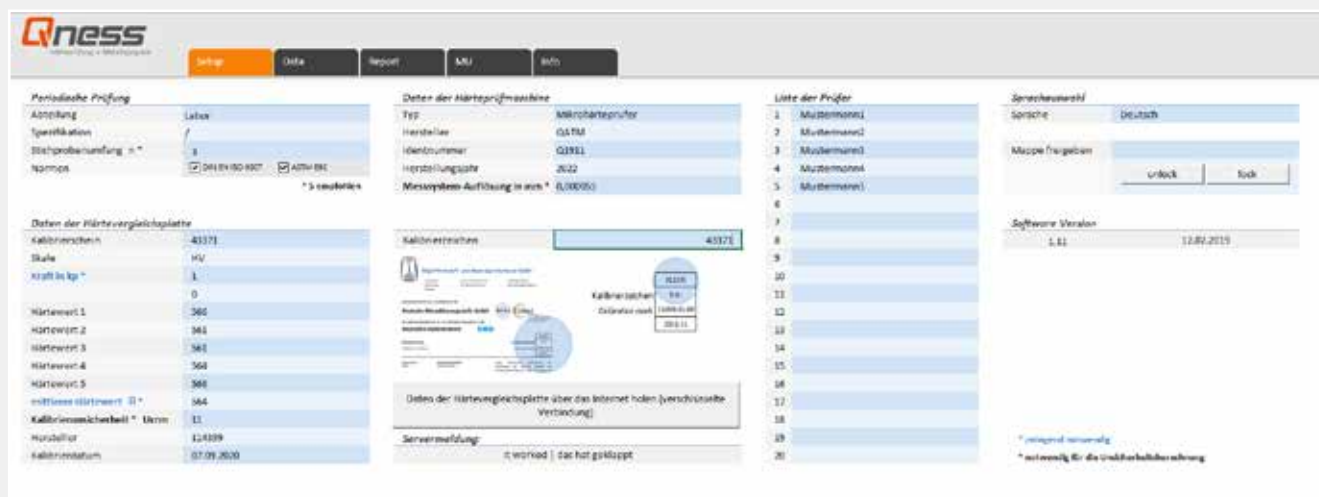

## ADVANTAGES

- | DAKKS calibration: according to current ISO and ASTM standards
- | Permissible measurement deviation engraved
- | Angular basic shape: optimal for automated periodic testing
- | Easy data insertion into the documentation template
- | Option: engraved grid lines
- | Option: multiple calibrations

## DOCUMENTATION TEMPLATE

The documentation template supports in the periodic standard-compliance testing on hardness tester. Measurement accuracy is visualized to show the consistency of the measuring accuracy of the test method with the current standard. By using original QATM QPREP hardness test blocks, data could be called

up online and the documentation template is filled automatically. A comprehensive range of statistical functions has also been built in. All results from the tests are clearly and logically documented and can be presented whenever there is an audit.

## Qprep Indenters

The various indenters are to be selected according to the respective test method (Brinell, Vickers, Rockwell and Knoop). The selection of QPREP indenters, test diamonds and carbide balls, which are certified according to DAkkS and/or ASTM, QATM, provides a broad test equipment portfolio for hardness testing.

Item No.	Unit	Description
<b>TEST DIAMONDS MAKRO</b>		
		<b>Description</b>
		<b>Length</b> <b>Ø</b>
<b>• with DAkkS/ASTM Certificate</b>		
QER28000EA	1 Pc.	Test diamond Rockwell 28 mm 6.5 mm
QER28400EA	1 Pc.	Test diamond Rockwell 28 mm 3.8 mm
QEV28000EA	1 Pc.	Test diamond Vickers $\geq$ HV0.01 28 mm 6.5 mm
QEV28000EZ	1 Pc.	Test diamond Vickers $\geq$ HV5 28 mm 6.5 mm with DAkkS Certificate
QEK28000EA	1 Pc.	Test diamond Knoop 28 mm 6.5 mm
<b>BALL HOLDERS WITH PRESSED-IN BALL – MAKRO</b>		
		<b>Description</b>
<b>• with DAkkS/ASTM Certificate</b>		
QEB28010EA	1 Pc.	Ball holders with 1 mm ball, pressed-in
QEB28025EA	1 Pc.	Ball holders with 2.5 mm ball, pressed-in
QEB28050EA	1 Pc.	Ball holders with 5 mm ball, pressed-in
QEB28100EA	1 Pc.	Ball holders with 10 mm ball, pressed-in
QEB28116EA	1 Pc.	Ball holders with 1/16" ball, pressed-in
QEB28108EA	1 Pc.	Ball holders with 1/8" ball, pressed-in
QEB28104EA	1 Pc.	Ball holders with 1/4" ball, pressed-in
QEB28102EA	1 Pc.	Ball holders with 1/2" ball, pressed-in
<b>BALL HOLDERS WITH EXCHANGEABLE BALL – MAKRO</b>		
		<b>Description</b>
<b>• with DAkkS/ASTM Certificate</b>		
QEB28025AA	1 Pc.	Ball holders with 2.5 mm ball - exchangeable
QEB28050AA	1 Pc.	Ball holders with 5 mm ball - exchangeable
QEB28100AA	1 Pc.	Ball holders with 10 mm ball - exchangeable
QEB28108AA	1 Pc.	Ball holders with 1/8" ball - exchangeable
QEB28104AA	1 Pc.	Ball holders with 1/4" ball - exchangeable
QEB28102AA	1 Pc.	Ball holders with 1/2" ball - exchangeable

Item No.	Unit	Description
<b>CARBIDE BALLS FOR BALL HOLDERS WITH EXCHANGEABLE BALL – MAKRO</b>		
<b>Description</b>		
<ul style="list-style-type: none"> <li>• with DAKKS/ASTM Certificate</li> </ul>		
QKG010025A	1 Pc.	Carbide balls 2.5 mm
QKG010050A	1 Pc.	Carbide balls 5 mm
QKG010100A	1 Pc.	Carbide balls 10 mm
QKG011108A	1 Pc.	Carbide balls 1/8"

## Remarks

„The listed expiration dates represent the minimum shelf life of the QATM consumables. Within this period the complete functionality of the products are guaranteed.

Reaching the expiration date does not cause a loss of the functionality of the products. Consequently, they can be used further more.

To ensure full functionality of the products, an **adequate storage** is essential. The products need to be reliably protected against humidity and temperature fluctuation.

When outside temperatures are high, delivery of the liquids of KEM 15, 20, 30, 35 and 60 is restricted. For further information please consult the data sheet.

The consumables and their packaging should not be opened unless for imminent use (e.g. cut-off wheels are hygroscopic and cold mounting materials might react with oxygen).

This might influence the functionality over time.

**The expiration date starts from shipping date.**

Complaints are checked by our quality management and application team.

Our general terms and conditions remain unaffected from these notes.”

## Expiration dates of consumables

	Product	Expiration date
		Years
<b>Cutting</b>	Abrasive cut-off wheels	2
	CBN cut-off wheels	2
	Diamond blades	2
	Cup grinder	2
	Coolant	2
	Additives for coolants	2
	Filter fleece & filter bags	2
<b>Hot Mounting</b>	Bakelite	2
	EPO-Max	2
	EPO black	2
	Duroplast	2
	Thermoplast	2
<b>Cold Mounting</b>	Methacrylate z.B. KEM 15+, 20, 30, 35, 60	1
	Epoxy resin KEM 90	1
	Mounting moulds	2
	Releasing agent	2
<b>Grinding/Polishing</b>	Grinding wheels	2
	GALAXY Diamond grinding discs	2
	SiC grinding foils	1
	SiC grinding paper without self-adhesive back/with foil back	2
	SiC grinding paper self-adhesiveUnits	1
	SiC grinding belts	1
	Adhesive foil double-side	1
	Adhesive carrier	2
	Diamond suspensions	2
	Diamond paste	2
	Diamond spray	2
	Aluminum oxide suspensions (Alumina, Eposal)	2
	Colloidal silica	2
	Polishing cloths	2
	Polishing cloth carrier discs	1
Magnetic foil	2	
<b>Etching</b>	Etchants & electrolytes	1
<b>Miscellaneous</b>	Ethanol & Aceton	2
	Ultrasonic cleaning agents (Tickopur)	2
	Replication material Provil Novo	1
